

## Flashing Alarm Box LED Instructions

Insert 3 AA type batteries (Use a good quality Alkaline to get 5 year life) **observing the orientation markings** in the battery box. The LED should begin to operate.

*The unit will not be damaged by reversed batteries, but it may short circuit and rapidly discharge the batteries if you fit them incorrectly.*

Fit the LED behind the coloured diffuse window in your alarm box. The mounting tab fitted to the LED will stick to a clean dry surface once the protective film is removed from the double sided tape.

Fit the battery pack, after removing the protective film from the mounting tape, in a convenient position. Ensure that the positions chosen will remain dry and water free.

The bright light flashes through a 10 degree beam which will diffuse to appear wider through the coloured window of the alarm box. “Pose” the LED to give the best visibility.

### **Safety, end of life, and warranty statement**

*This unit is an installable component and therefore requires installation. The installation, use and suitability in a given application is the responsibility of the installer. Any damages or consequences are limited to the replacement of the unit under the 12 month guarantee. Do not allow the unit to become damaged, wet, dismantled, or make modifications to the parts. Do not use the unit outside of its operating voltage specification or use with anything other than 1.5v AA batteries. At end-of-life this product should be taken to suitable recycling facilities and not put into general household rubbish.*
